1. Claims 18-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group of invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on March 19, 2008.
2. To expedite the prosecution of the instant application, the applicant is advised to cancel all withdrawn claims in the next response.
3. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claimed features of having “a grant generator for selecting a switching request to be granted” and having “the preference pointer provides a control signal to the BRRT cells” contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. To be more specific, it is “the grant generator for selecting service request signals”, and “the preference pointer provides control signals to each of the BRRT cells” according to the detailed description of Figures 15 and 16A on pages 40-42.

4. Claims 1-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 1-2, it is confusing for reciting “a grant generator for selecting a switching request to be granted “ as in the preamble since a grant generator is to generate a grant

for a switching request, not to select a switching request to be granted. Lines 3-5, it is vague and indefinite to recite a structure of BRRT cells and a preference pointer without further define as to how the structure of BRRT cells is formed and how the preference point is controlling the structure. To be more specific, it is unclear as to how the individual BRRT cells are connected to one another forming the structure. It is also unclear as to what and where the inputs and outputs are for each cell. It is also unclear as to how the preference point is controlling the structure of BRRT cells by providing a control signal.

5. No prior art rejection or allowable subject matter can be applied at this time due to the nature of 112 1st and 2nd paragraph problems as indicated above.
6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sivarajan et al. and Golla et al. are cited to show the feature of binary tree arbitration structure similar to the claimed invention.

Yang et al. '936 & '641 are cited to show the feature of multi-stage switches in cascade similar to the claimed invention.
